Ultrasonic design

Ultrasonic flow meter NAUTILUS
“a state-of-the-art technology that guarantees reading accuracy (R500)”.
REV.16

In contrast to a mechanical WOLTMANN water meter, the NAUTILUS ultrasonic flow meter has a **static design, with no moving parts**. The advantage is clear, wear and breakage due to suspended solids are eliminated and the measurement accuracy is maintained over time.

NAUTILUS is ideal for flow measurement in **water supply systems, agriculture or industrial installations**. Together with our IRIS TELELECTURA solutions, it is the best solution for efficient control of water resources (page 6).

The **twin-beam technology** optimises the equipment's battery, offering an **autonomy of more than 10 years**. Continuous, maintenance-free flow monitoring is now possible.

Technical specifications

- ✓ Maximum working pressure: 1.6 MPa
- ✓ Temperature: T50
- ✓ Accuracy: Class 2
- ✓ Battery life: 10 years
- ✓ Protection: IP68
- ✓ Ambient Operating Temperature: -20 °C/55 °C
- ✓ Pressure drop: Δp16
- ✓ Data storage: 7x24h, 365 days and 72 months data storage.
- ✓ Output: RS485 MODBUS, pulse open collector.

Water meter outputs

OPEN COLLECTOR

Supported voltage range 12 -24V (recommended at 24V)

Pulse width 100 ms

Maximum current for contact closure 200mA

White wire Pulse output +

Black wire Pulse output -

OTHER

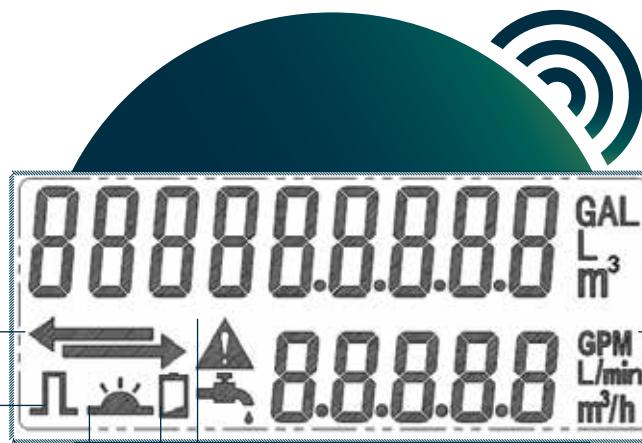

Green wire

RS485A +

Yellow wire

RS485B -

Dial

Cumulative flow (m^3 , L, GAL,)

Instantaneous flow rate (m^3/h , L/min, GPM)

Direction of flow

Pulse output

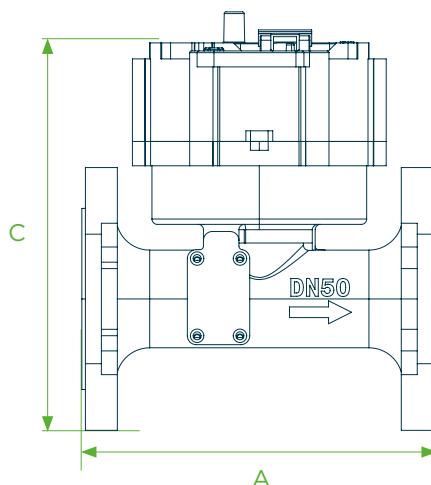

Alarm

Leak detection

Low battery alert

IR communication

REV16

Installation instructions

The optimum installation of the flow meter is vertically upstream of the flow (or diagonally upstream) or horizontally downstream of the flow (or diagonally downstream) to avoid the pipe being partially empty. Avoid high points of the pipe as air accumulation may be found at these points which will cause inaccuracy in the reading.

Do not force the water meter during installation, avoid tensile and torsion stresses.

To install the meter, follow the steps below:

1. Section the piping to leave space for installing, please refer to the flow meter dimensions first.
2. Fix the flanges to the pipes.
3. Add a gasket between the flange and the pipe, then keep it concentric, use the screws for tightening.

Working conditions

Maximum permissible error

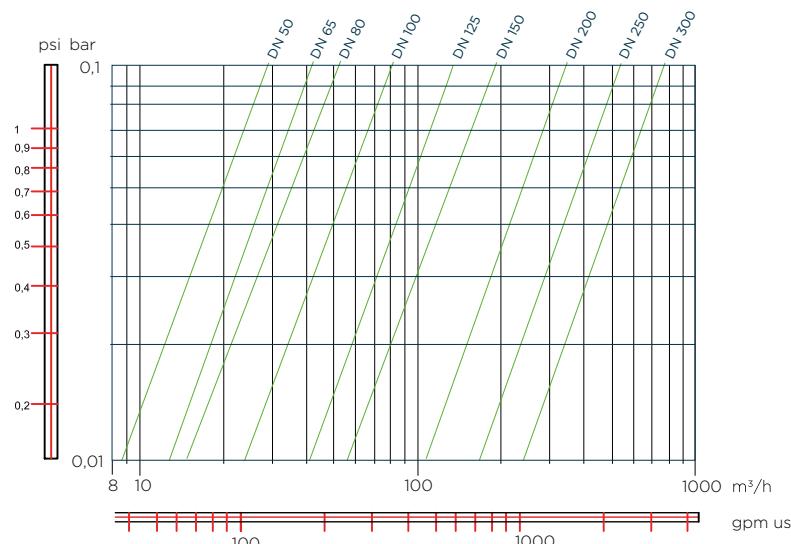

WATER TEMPERATURE RANGE	MAXIMUM PRESSURE	RANGE	ERROR (%)
-20 °C - 55 °C	≤ 16 bar	$Q_1 \leq Q < Q_2$	± 5%
		$Q_2 \leq Q \leq Q_4$	± 2%

Automatic meter reading

Adding the IRIS communications module to the water meter will enable automatic remote readings. IRIS devices allow mechanical meters to access the world of IoT communications. Its great versatility allows it to be integrated with a wide range of meters.

The IRIS communications module is integrated with the Demeter system. It supports the integration of a wide range of devices using various communication technologies to suit the needs of the installation.

Alarms

Reverse flow alarm:

Reverse flow detection. Only available for the inductive pulse version. Configuration adjusted by communications.

Leakage alarm:

Detection of continuous consumption for a maximum period of time. Configuration adjusted by communications.

Water meter stopped alarm:

The alarm is activated if no consumption is detected for a maximum period of time. Configuration adjusted by communications.

Under-dimensioned water meter alarm:

Detection of flow rate higher than the overload flow rate for a maximum period of time. Configuration adjusted by communications.

Water meter tampering alarm (tampering):

The alarm is triggered in case the device is not mounted on the meter. Only available for the inductive pulse version.

Battery status alarm:

Various battery alarm levels are activated depending on the remaining battery life.

Functionality

Operating profiles based on the recording consumption and communications records requirements:

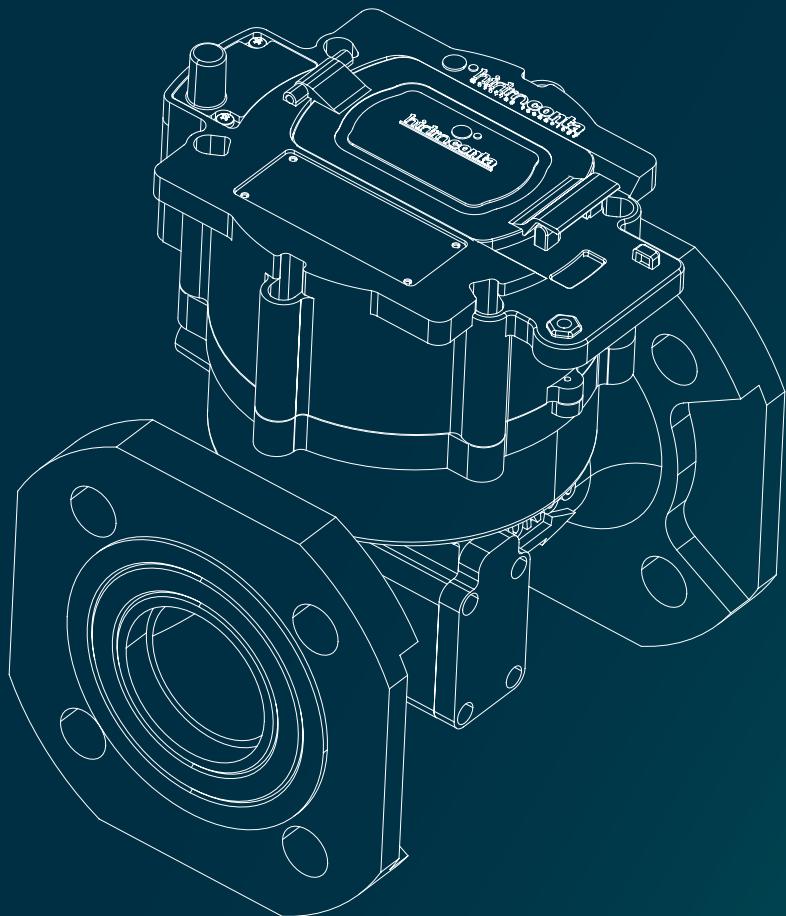

- ✓ · Normal-24: Sending data every 24 hours and recording every hour.
- Normal-8: Sending data every 8 hours and recording every hour.
- Medium: Sending data every 12 hours and recording every 30 minutes.
- Extreme: Sending data every 6 hours and recording every 15 minutes.

MODE	AUTONOMY	COMUNICATION	DATA HISTORY RECORD
Normal -24	12 years	24 h	1 h
Normal -8	TBD	8 h	1 h
Medium	TBD	12 h	30 min
Extreme	TBD	6 h	15 min

* TBD (to be determined). 24 maximum storage and sending readings: each sending allows accumulating up to 24 values for each communication interval.
